

# My first Fmark document

José Lopes

Sunday, Sep 4 2012

## Abstract

Fmark (Friendly Markup) is a very simple markup language without syntax, capable of producing PDF and XML files, and very simple document but sophisticated styling.

## 1 The first section

Hello, welcome to Fmark. This is the first section of your document.

### 1.1 The first subsection

It is very simple to create subsections. No special characters are needed. Simply use indentation to indicate the beginning and end of your sections.

### 1.2 The second subsection

Another subsection with a different title and a <sup>1</sup>. Again very simple.
